

FESTO

The Pneumatics Installation Guide

The right installation materials for every application – system solutions from Festo

“Everything from a single source!” – The variety of our installation range is what enables us to provide a competent solution to all manner of industrial requirements, no matter how diverse these may be.

Festo’s Pocket Guide to Pneumatic Installation will help you to select the right combination of products from the many fittings and connectors, the non-return, pressure control and flow control valves and tubing options.

For your convenience and for increased productivity.

More information

Whenever you see this symbol in the printed or electronic catalogue, it means the product is from our core product range for the main applications of automation technology.

The symbol provides you with quick guidance, and makes it easier to place your order. Unless otherwise specified, all products included in this range are in stock and ready for immediate delivery.

Key

D1 Pneumatic connection 1

D2 Pneumatic connection 2

D3 Pneumatic connection 3

D5 Male thread for hex nut

Di For tubing I.D.

n No. of inputs/outputs

qnN The standard nominal flow rate q_{nN} is the flow rate based on standard conditions at an operating pressure of $p_1 = 6$ bar and an output pressure of $p_2 = 5$ bar, measured at room temperature $t = 20$ °C.

★ Product from our core product range for easy selection and quick ordering

Well combined: Tubing/fitting combinations for all individual situations

While many of our competitors focus on tubing or on threaded fittings, the Festo range is characterised by our trademark system solution approach. It has been consistently enhanced in recent years in terms of both tubing and fittings, with considerable effort going into ensuring application-specific tubing/fitting combinations that are optimally harmonised.

The perfect choice of tube and threaded fitting combination depends mainly on the exact place of installation. Each individual case is characterised by a series of different requirements for tubing/ threaded fitting combinations. However cases can often be pinned down using a single feature for rapid orientation.

A glance at the overview of our most popular tubing/threaded fitting combinations will help you to make the right choice quickly and reliably

Product finder for tubing and fittings

ESimply open in the electronic catalogue. Enter your application requirements and let our system guide you quickly and reliably to an appropriate solution. This makes selecting extremely convenient!

1 Tubing/fitting combinations

Tubing	suitable for Fitting	One-way flow control valve	Applications
 Standard			
PEN  → 20	QS-B  → 54	GRLA  → 173	Suitable for a wide range of tasks and attractively priced. Flexible and high level of abrasion resistance
PUN  → 25	QS  → 67	GRLA  → 174	Maximum flexibility in standard applications thanks to an extremely wide range of options for combining the different types
PAN  → 15	QS  → 67	GRLA-F  → 174	For standard applications with extended characteristics
 High pressures			
PAN-MF  → 17	NPQM  → 90	GRLA  → 177	Ideal for use in mobile pneumatics, even at low temperatures
PAN-R  → 17	NPQH  → 96	GRLA-F  → 174	High-performance, with extended pressure range, high durability and corrosion resistance

1 Tubing/fitting combinations

Tubing	suitable for Fitting	One-way flow control valve	Applications
 Resistant to chemicals, suitable for the food industry and hydrolysis resistant			
PLN  → 23	NPQP  → 104	GRLA-F  → 174	Resistant to cleaning agents, FDA compliant and economical
PUN-H  → 29	NPKA  → 116	–	Hydrolysis resistant and suitable for water applications. Very easy to install thanks to the “one click principle”
PFAN  → 19	NPQH  → 95	GRLA-F  → 174	Up to 150 °C. Suitable for use in the food industry, FDA compliant and resistant to cleaning agents.
PFAN  → 19	NPCK  → 122	CRGRLA  → 179	Easy-to-clean thanks to Clean Design, maximum corrosion resistance (CRC 4) and FDA-compliant
PFAN  → 19	CRQS  → 108	CRGRLA  → 179	Maximum resistance to corrosion (CRC 4) and aggressive acids and lyes
 Anti-static			
PUN-CM  → 28	NPQM  → 89	GRLA  → 177	Maximum protection for electrical and electronic components

1 Tubing/fitting combinations

Tubing	suitable for Fitting	One-way flow control valve	Applications
 Flame-retardant			
PUN-V0  → 32	NPQM  → 89	GRLA-F  → 174	For areas with high risk of fire, flame-retardant tubing, tested as per DIN 5510-2
 Resistant to welding spatter			
PUN-V0-C  → 33	NPQH  → 95	GRLA  → 177	Ideal for applications in areas involving welding spatter
PAN-V0  → 18	QS-V0  → 113	GRLA  → 177	Double-wall tubing with special fitting, reliable in applications involving welding spatter

Many questions regarding media resistance are answered here:

2 Tubing/pipes

2.1 Plastic tubing

Selection aid

12

Tubing – the flexible transmission component

Tubing is indispensable in connecting pneumatic valves, cylinders and decentralised compressed air preparation systems because of its flexibility and low space requirement. Festo offers a full tubing range, optimised for special requirements.

Pipes

Ideally suited for supplying compressed air within machines and also for small compressed air networks within buildings: compressed air piping PQ. Available in both aluminium and polyamide designs, the PQ range is the perfect complement for the push-fit system CQ. And regardless of whether plastic or aluminium – both designs ensure optimum flow conditions thanks to their smooth inside walls.

3 Fittings

3.1 For standard O.D. tubing:

Selection aid	
– Push-in fittings	44
– Multiple distributors	47
– Function fittings and special function connectors	48
– Push-in connectors	49

The right fitting for every task

Festo's range of fittings is incredibly diverse, with a portfolio that consists of materials, designs and connections in a variety of standard or innovative options. And that's not to mention the range of sizes available. This portfolio is sure to include the most appropriate fitting for every application.

Our fittings and connection technology are designed to be as straightforward as possible to make installation truly quick and easy – without compromising on process reliability.

Polymer:

- NPQP: Solvent-resistant series, Polypropylene
- QSM-B/QS-B: Standard series with core

functions for simple applications

- QSM/QS: Standard series with a wide range of variants for standard applications
- QS-V0: Welding spatter resistant series for applications involving flying sparks
- NPKA: Cleanroom compatible series

Metal:

- NPQM: Cost-optimised metal series, nickel-plated brass
- NPQH: Highly versatile all-metal series, nickel-plated brass
- CRQS: Extremely sturdy stainless steel series

3.1 For standard O.D. tubing

3.1.1 QS-B, Core functionality

Always reliably connected in standard applications

The standard combination with an attractive price/performance ratio. Of course the push-in fitting QS-B also offers the usual Festo quality. Vacuum-compatible, halogen-free and always reliably connected in standard applications. This is ensured by the nickel plated brass design as well as the stainless steel retaining claw of the proven quick connection principle. The temperature resistance of 0 to +60 °C (with QS standard –10 to +80 °C), the permissible operating pressure of –0.95 to 10 bar (QS standard: –0.95 to 14 bar) and the product range of the QS-B with the 183 most popular types are designed for the core functionality. Ideal for basic pneumatic applications in combination with plastic tubing PEN.

- 183 types of QS-B fitting
- Available in mini and standard sizes
- Metric and R thread only
- Quick installation: simply plug and work
- Simple uncoupling: just press down the blue release ring to disconnect tubing

3.1 For standard O.D. tubing

3.1.2 QSM, mini and QS, standard

Individual solutions thanks to a wide range of variants

An unbeatable range of variants: the proven QS push-in fittings from Festo. Over 1,000 variants to suit the needs of your applications. In combination with the plastic tubing PUN the optimum choice for maximum flexibility in standard applications.

- From A to Z, always the fitting of your choice: over 1,000 variants
- Quick installation: simply plug and work
- Simple uncoupling: just press down the blue release ring to disconnect tubing

Tubing, with standard O.D. → 15

3.1 For standard O.D. tubing

3.1.3 NPQM Brass (nickel-plated)

Sturdy and with high load bearing capacity, not only in the automotive industry

The sold-metal fitting NPQM is characterised by its sturdiness and high load bearing capacity. Optimum connection with the electrically conductive tubing PUN-CM for dissipating possible electric charges.

- Housing and release ring: Nickel-plated brass
- Operating pressure: –0.95 to 16 bar
- Antistatic in combination with PUN-CM
- Flame-retardant in combination with PUN-V0

3.1 For standard O.D. tubing

3.1.4 NPQH Brass (nickel-plated)

The all-metal fitting NPQH – the economical solution for sensitive applications

More robust, resistant to high temperatures, systematically easier to clean thanks to enhanced corrosion protection as well as suitable for the food industry. In combination with the high temperature-resistant, German Technical Control Board (TÜV) tested tubing PFAN, the push-in fitting NPQH can withstand temperatures up to 150 °C at operating pressures of up to 20 bar. With 100 new NPQH types, the range offers a wide choice for every user.

- Sturdy push-in fitting in all-metal design
- Temperature resistant to 150 °C at up to 20 bar
- Highly resistant to corrosion and cleaning agents thanks to electroless nickel plating

3.1 For standard O.D. tubing

**3.1.5 NPQP
Polypropylene**

Cost-effective alternatives for areas requiring thorough cleaning

Its high corrosion resistance and resistance to chemicals makes the NPQP an effective alternative to expensive stainless steel fittings. It also offers error-free operation even in areas requiring thorough cleaning.

- Housing and release ring: Polypropylene
- Error-free operation even in areas requiring thorough cleaning
- Operating temperature: -20 to $+60$ °C
- Operating pressure: -0.95 to $+10$ bar

3.1 For standard O.D. tubing

3.1.6 CRQS Stainless steel

Holds firm in conditions that other fittings fail to meet.

Maximum corrosion protection means being at home in the food processing and packaging industries. In combination with the tubing PFAN, the fitting CRQS is particularly suited to use in the most aggressive media such as acids and alkalis.

- For demanding applications in aggressive environmental conditions
- Maximum corrosion resistance
- Temperature range -15 to $+120$ °C
- 70 different types available
- Suitable for use with acids and alkalis, resistant to cleaning agents and lubricants

Tubing, with standard O.D. → 15

3.1 For standard O.D. tubing

3.1.7 QS-V0, Resistant to welding spatter

Faultless operation in applications involving welding spatter

No chance for welding spatter: the push-in fitting QS-V0 specially developed for the welding spatterresistant double-sheathed tubing PAN-V0 is designed to also hold the external tubing. This rules out the possibility of a gap forming between the tubing and fitting where welding spatter could gain entry.

The materials used for the push-in fitting QS-V0 comply with the most stringent requirements category V0 according to UL 94 and therefore guarantee optimum protection in areas where there is a risk of fire.

- For environments with flying sparks
- For increased requirements for fire protection, for example in automobile production
- Flame-retardant to UL 94 V0

3.1 For standard O.D. tubing

3.1.8 NPKA, click fitting Polymer

NPKA makes changing tubing child's play

With the unique click mechanism, you can change a pipe or tube with one hand. The audible click noise signals that the connection is firm, secure and leak-tight – even if it's often connected and disconnected. The light, corrosion-free polymer brings many advantages: it is free of non-ferrous metals, fluorine, silicone and grease, is FDA approved, and suitable for clean rooms. Ideal for the electronics and semiconductor industries, assembly of small parts and battery cells, or for food and beverage production.

- Very easy to operate with one hand
- Many possible uses thanks to polymer as the sole material
- Easy-to-clean CleanLook without corners or edges

3.2 For standard I.D. tubing

3.2.1 NPCK, fitting Stainless steel

The first choice for food and splash zones

In these cleaning-intensive areas the NPCK is ideal. It fulfils all Clean Design requirements and is FDA approved. The special design of the union nut prevents dirty edges and the build-up of microorganisms or other forms of contamination. Also of interest to process automation and the pharmaceutical industry: the NPCK can carry a very wide range of media thanks to the use of stainless steel.

- Fulfils the hygiene requirements of HACCP
- Resistant to corrosion, cleaning agents and high temperatures
- Clean Design

3.2 For standard I.D. tubing

3.2.2 N/CN, barbed fittings

N/CN barbed fittings: At home in tight corners

Smart design makes this fitting extremely compact. Very popular in the electronics and food industries, in control cabinets or assembly frames. To connect, simply push the tubing onto the ribbed sleeve – ideally using the Festo connecting and disconnecting pliers.

- For tubing O.D. from 2 to 6 mm. Numerous variants.
- Variants:
 - With sealing ring
 - With barbed fittings for Festo tubing
 - Corrosion-resistant
 - Acid-resistant
 - Rotatable

3.2 For standard I.D. tubing

3.2.3 CK, quick connectors

CK quick connectors: The classic solution for stringent safety requirements

Absolutely safe and extremely economical – wherever connectors are to be installed permanently. To connect, simply attach the tubing and secure it with the union nut.

- For tubing O.D. from 3 to 13 mm. Numerous variants.
- Variants:
 - Aluminium
 - Polyamide
 - Sealing ring
 - Moulded-on sealing rim

3 Fittings

3.3 Push-in fittings for pipes

Selection aid 134

A comprehensive range of nominal sizes

Practical design – for practical applications: the CQ system retains the pipes externally in a way which ensures that there is no reduction of nominal size. Extremely easy and fast to install; simply push in – you don't even need any tools! Suitable for polyamide and aluminium pipes.

- For O.D.: 12, 15, 18, 22 and 28 mm
- Also suitable for plastic tubing PAN and PUN with O.D. 12mm
- For compressed air, vacuum and liquids
- Can be re-used a number of times
- Plug connector materials FDA-approved

4 Threaded fittings Selection aid 138

Threaded fittings NPFC

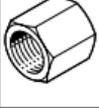

With the threaded fittings nothing now stands in the way of the costeffective installation of service units, control cabinets and other pneumatic installations.

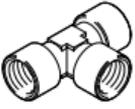

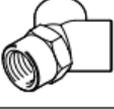

- Operating temperature: –20 ... +150 °C
- Operating pressure at 20 °C: –0.95 ... +50 bar
- Medium: compressed air, vacuum, others on request
- Version: nickel-plated brass
- It is recommended to seal parallel threads with thread sealing tape GWB-0,1 (Part No. 9076)

Shut-off valves – “Stop & Go” for your compressed air

Whether used in maintenance tasks, for rapid stopping during horizontal movements or as part of a backup system in the event of a pressure failure – Festo’s shut-off valves are the obvious choice for applications requiring complete shut-off of compressed air thanks to their impressive ability to shut off and quickly restore the supply of compressed air.

- Piloted non-return valves HGL-... are activated as soon as no control signal is present.
- Quick exhaust valves SE/SEU-.../VBQF-... for increased speeds with single-acting or double-acting cylinders. SE-... with ducted exhaust air
- Ball valves QH-... and shut-off valves VBOH-.../HE-... for shutting off the compressed air.
- Function combination VBNF-... piloted non-return valves with manual exhaust function

5 Shut-off, pressure control and flow control valves

5.2 Pressure control valves Selection aid 164

5.2.1 Pressure regulators 165

5.2.2 Differential pressure regulators 167

Pressure regulators – for optimum performance

You need your system to operate at peak performance every day. Pressure regulators and differential pressure regulators can help you achieve this. They guarantee the required pressure directly at the system, regardless of the input pressure, and compensate pressure peaks on the supply side.

Pressure regulators LR-... and LRMA-... keep the output pressure stable

- Swivel joint 360° rotatable
- Flow rates 22 to 125 l/min
- Variants:
 - With or without pressure gauge
 - Screw-in or inline variants
- Connections:
 - M5 to R $\frac{1}{4}$

Differential pressure regulators LRL-... and LRL-... maintain a manually set differential pressure between the primary pressure at the screw-in thread and the secondary pressure at the QS connection.

- Swivel joint 360° rotatable
- Flow rates 50 to 500 l/min
- LRL variants:
 - With non-return function
 - Screw-in or inline variants
- Connections:
 - M5 to R $\frac{1}{4}$
- Tubing with swivel connector, 360° rotatable
- Flow rates 0 to 100 l/min
- LRL variants:
 - With or without pressure gauge
 - Screw-in or inline variants
- Connections:
 - M5 to R $\frac{1}{4}$

1) open/closed

One-way flow control valves – the right setting is crucial

Setting made easy: such as metering a flow rate, for example for speed regulation of single- or double-acting cylinders. Festo's compact and sturdy oneway flow control valves provide the right solution for every application. The numerous variants suit every environment and are quick and easy to fit.

Function combinations

Numerous control functions integrated in one component: variable piston speeds, momentary intermediate stop and individual manual exhaust – saves time, costs, space.

5 Shut-off, pressure control and flow control valves

5.3 Flow control valves Selection aid 170

5.3.1 One-way flow control and flow control valves 173

- The product of your choice – for correct setting of the flow rate
- Fast installation with QS connections
- Maximum adaptability – directly at the cylinder or inline
- A large number of variants – GRLA/Z/O, GRGA/Z/O, GR/O; VFOC, VFOF
- Range of flow rates 0 – 2000 l/min
- Tight seal thanks to G thread
- Variants:
 - Precision flow control valves
 - Screw-in or inline variants
 - Stainless steel, die-cast zinc, polymer
- Connections:
 - For cylinders with M3 to G $\frac{1}{2}$ connecting thread
 - For tubing with \varnothing 3 to 12 mm

Save installation space, time and money!

Extremely innovative is one way of describing the new compact control valves from Festo for pneumatic drive solutions. Thanks to their improved design and the integration of several control functions in one component you can save valuable installation space. And gain more time and reliability during commissioning.

- GRXA-HG:
 - The function combination consists of a one-way flow control valve and a piloted non-return valve.
 - Stop function and speed setting in one housing
 - Swivel pilot connection 21 perpendicular to screw-in direction

5 Shut-off, pressure control and flow control valves

5.4 Functional combinations 185

- VFOF-LE-BAH:
 - One-way flow control valve for exhaust air (pneumatically controlled) with manual exhaust function
 - Over 50% saving on space: mounted directly on or very close to the drive
 - Energy- and environmentally friendly, thanks to lower compressed air losses and lower noise emissions
 - Integrates three functions: variable piston speeds, short intermediate stop and individual manual exhaust

Tubing, with standard O.D. → 15

6 Couplings Selection aid 188

- 6.1 KD/KS, quick connection couplings shut-off at one end shut-off at both ends
- 6.2 KD/KS, safety couplings
- 6.3 MCK, union nuts

All you need for fast, secure connections: couplings

Whether with quick connection couplings KD/KS or safety couplings KDS/KSS: quick and safe connections can be yours when and where you need them.

Festo's range of couplings is suitable for all industries and applications. Whenever and wherever they're needed. Particularly if you are looking for a quick, easy and, if need be, completely safe way of making and releasing connections.

- Easy and safe
- Quick connection couplings KD/KS
- Safety couplings KDS and KSS, "S" for Safety
- Threads from M3 to G 1/2
- Wide range of connections: male and female thread, barbed fittings, fittings with union nut, bulkhead fittings

7 Distributors

7.1 FR, distribution manifold

Selection aid 194

Distributors

The following pages contain all the important information you will need to order tried-and-tested aluminium FR distribution manifolds.

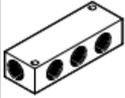

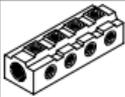

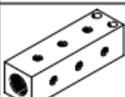

The broad selection of multiple distributors with push-in fittings is detailed in Section 3.1.2.2.

8 Rotary distributors

Completely flexible media supply and return

Whether it's compressed air, vacuum, liquids or gases – the single and multiple rotary distributors GF from Festo guarantee the secure transmission of media from stationary sources to rotating machine parts.

- Radial and axial outputs with multiple rotary distributors
- Sturdy design with double bearings to protect against mechanical loads

9 Pressure gauges

9.1 Pressure gauge Selection aid

200

Festo pressure gauge for every application:

Whether they're being used for compressed air or vacuum.

Measured in bar, psi or MPa.

On a service unit or flanged in a control cabinet. The broad range of pressure gauges offers the right solution for every application.

- Easy installation
- Various scales (bar/psi/MPa)
- Rapid pressure monitoring thanks to the red-green pressure gauge

With Festo, you don't need a magnifying glass to find accessories

You only really notice accessories when you need them and can't find them.

Then it's like searching for a needle in the proverbial haystack. Not with Festo! Our comprehensive range of accessories including sealing rings, tubing cutters or silencers is carefully thought through – to ensure you have everything you need for speedy installation.

- Sealing material
- Cutting tools for tubing
- Tubing strap
- Silencer
- Silencer LFU
- Air guns

LPZ-LD	M12x1.25	184322

Air gun nozzle LPZ-RG

with straight tube

Type	D1	Part No.
Nickel-plated brass		
LPZ-RG-150-B	M12x1.25	565317

Air gun nozzle LPZ-RB

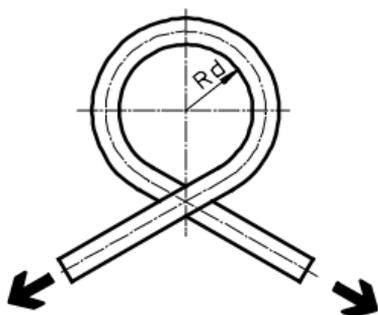

with elbow tube

Type	D1	Part No.
Nickel-plated brass		
LPZ-RB-150-B	M12x1.25	565316

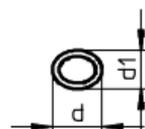

Measuring methods

Flow-relevant bending radius
Rd

The tubing is bent in the direction of its inherent flexion until a 5% flattening of the tubing O.D. occurs.

The Rd is then calculated. There is no reduction in the flowrate up until the Rd is reached

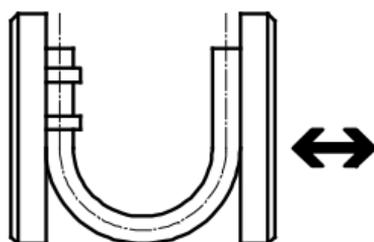

Cross section flattened as a result of bended tubing

d = non deformed tubing OD

d1 = deformed tubing OD

Minimum bending radius
Rmin

The tubing attached to a movable plate is bent until the deformation results in a kink. The measured value is the minimum bending radius Rmin. This Rmin leads to considerable reductions in flow.

Be sure to select the correct tubing connector when installing an application.

The available cross-section from the air preparation unit to the valve should be as wide as possible to ensure maximum air supply. This does not result in any loss of air. For the application, on the other hand, the tube cross-section from the valve to the drive should be kept as small as possible to keep air consumption to a minimum. The appropriate tube diameter depends on the amount of air required by the application.

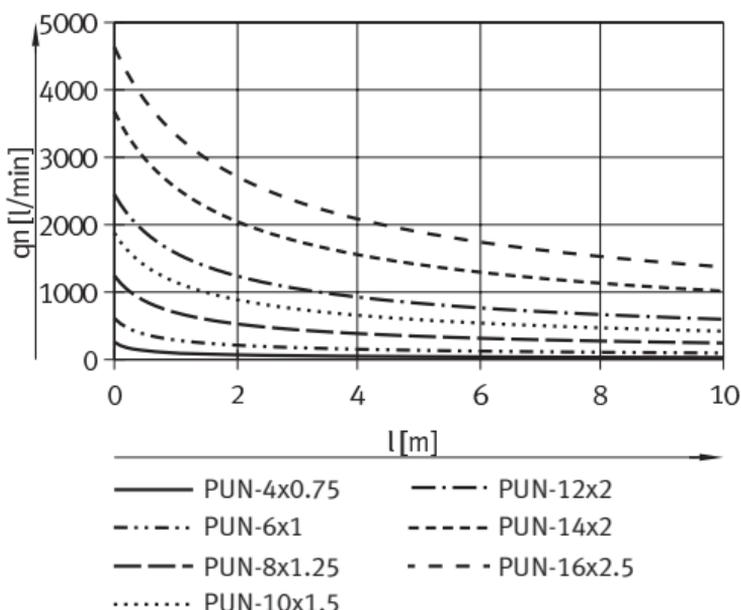

Select the shortest possible tubes to ensure that the required volume is not lost along the tube length. The diagram opposite uses a Festo tubing/fitting combination (QS and PUN) to illustrate how the volumetric flow rate decreases the longer the tube length is.

Festo push-in fittings do not restrict the nominal diameter of the tubing connector.

Even the shape of the tube has an effect on the pressure drop: if a high flow rate is required, then straight tubes are the best choice. Spiral tubing is characterised by its compact design, although friction losses are increased due to the many coils.

Volumetric flow rate (qn) as a function of tube length (l)

PUN (P1 = 6 bar, P2 = 5 bar)

Electronic catalogue and sizing software

The electronic catalogue enables you to find the required product quickly and easily. Use the integrated product configurator to select the necessary technical features step by step. This will ensure that the suggested product fulfils your design specifications. Coloured markings and symbols provide assistance and guidance during selection. The graphics for complex products adapt them-

selves dynamically to your design. All further information relating to a particular product, such as the CAD data, accessories or documentation, can later be accessed via the menu. To facilitate repeated ordering of frequently required components, you can save your design as a favourite, or place it directly in the shopping basket.

→ www.festo.com/catalogue

Air Consumption

Quickly and conveniently determine your system's air consumption. Simply capture all drives and hoses, set cycle times and working pressure and the air consumption is already calculated per minute

and per day. The input table and results can be exported directly to Excel.
